Mobile Engineer with 4+ years of experience delivering Flutter applications end-to-end. Skilled in building multi-module codebases, creating reusable UI components and internal libraries, and implementing Clean Architecture with unit testing for core business logic. Interested in full-stack development and continuously learning new technologies to broaden my skill set.

PROFESSIONAL EXPERIENCES

Mobile Engineer in AMK Technology Sdn Bhd (Accenture - Allianz)

Jun 2025 - Current

- Improved mobile app maintainability by creating reusable UI components, responsive grid layouts, and a reusable validation structure to separate validation logic from UI.
- Developed unit tests across data, domain, and BLoC layers, using Mockito for dependency mocking.
- Contributed to migrating a Flutter mobile app to Flutter Web, implementing responsive layouts and resolving web specific issues including camera access and image cropping functionality.
- Helped migrate a legacy server-side backoffice into a Flutter Web SPA.

Mobile Engineer in PT. Neural Technologies Indonesia (NTI)

Aug 2021 - May 2025

- Proposed and implemented a multi-package Flutter architecture for the ERP platform using Melos, Clean Architecture, and TDD, splitting the monolith into feature-specific and core shared packages to improve scalability, maintainability, and build performance across developers/teams.
- Boosted productivity by creating a reusable Flutter dashboard library a comprehensive UI toolkit, and implementing modular multilingual support. The libraries reduced onboarding complexity across projects.
- Established Flutter code conventions, architecture standards (clean architecture), and modular approaches, enabling seamless collaboration, easier bug fixing, and faster task execution for the mobile team.
- Led the mobile development team for the Rukun App, a feature-rich application, integrating key functionalities such as Midtrans payment gateway, WebSocket for real-time updates, a multi-functional chat feature (supporting text, media, and message replies), and deep linking for seamless user navigation and content sharing.
- Responsible for the deployment of five mobile applications, including the Rukun App and Connect IA, to both Play Store and App Store, ensuring quality and timely releases.
- Built reusable custom React hooks to simplify API calls and reduce repeated request-handling logic in a React + TypeScript application.
- Created a TypeScript-first table abstraction that generates table configuration from a data type, making table setup typesafe and faster to implement.

Flutter Engineer in PT. Ultimo Solution

Dec 2022 - Aug 2024

- Enhanced team efficiency by creating a reusable FormBuilder and refactoring Dart code to follow best practices, resulting in more maintainable applications.
- Developed an offline-ready fielding application with Flutter Hive and ArcGIS Map SDK, integrating Android Service API for seamless background downloads of large map file

Android Engineer Freelancer in PT. Solusi Digital Industri

Mar 2021 - Sep 2021

- Created an offline-ready POS application with SQLite, featuring synchronization for seamless updates, and integrated with a thermal printer for receipt generation.

EDUCATION

Bandung State of Polytechnic (Indonesian: Politeknik Negeri Bandung/
POLBAN), Bachelor of Applied Computer Science

Aug 2018 - July 2022

TECHNICAL SKILLS

Experienced with: Dart, Typescript, Javascript, Kotlin, Flutter, Nest JS, Express JS, Android Native, Vue JS, React JS, Git, Firebase SDK, Flutter Bloc, Google Map, Arcgis Map,

Familiar with: Code Review, Agile Methodology, Peer Programming.

NON TECHNICAL SKILLS

Experienced with: Communication, Problem-Solving

Characteristics: Love to learn a new technology. Love to teach people about coding.

Language: English (Professional), Indonesia (Native).
